COMPLIANCE REPORT FOR ENVIRONMENTAL CLEARANCE (EC)

- (i) F.No.J-11011/281/2006-IA.II (I) dated 07.07.2017
- (ii) F.No.J-11011/281/2006-IA.II (I) dated 02.01.2007
- (iii) No, J.11011/28/98-IA II dated 23.11.1998

SIX MONTHLY COMPLIANCE REPORT

PRESENT STATUS OF THE PROJECT:

The units envisaged in the aforesaid EC No, J.11011/28/98-IA II dated 23.11.1998 and F.No. J-11011/281/2006-IA.II (I) dated 02.01.2007have been implemented and are under operation.

With respect to the EC F.No.J-11011/281/2006-IA.II (I) dated 7th July 2017, few units are under establishment and the remaining units will be established in a phased manner. For this purpose, Consent toEstablish (CTE) was obtained from Tamil Nadu Pollution Control Board (Consent Order # 170629163265 dated 23.09.2017) and valid up to 31.03.2024. For the units under operation, Consent toOperate renewal (Consent Order # 170827952301 dated 21.04.2017) has been obtained and is valid up to 31.03.2022. The details of the existing units and the proposed expansion units along with the present status are given below:

S.No	Manufacturing facilities	UOM	Existing capacity	Proposed Expansion	Total Capacity after Expansion	Present status
1	Coke Oven Plant (Non – Recovery type)	MTPA	0.5	-	0.5	Nil
2	Sinter Plant - 1 (20 m ²)	MTPA	0.175	-	0	Nil
3	Sinter Plant - 2 (90 m ²)	MTPA	1.06	-	1.06	Nil
4	Sinter Plant - 3 (90 m ²)	MTPA	-	1.06	1.06	Yet to be implemented
5	Blast Furnace - 1 (402 to 650 m ³)	MTPA	0.367	0.316	0.683	Construction of new BF of 650 m3 or modifying the present BF from 402 to 650 m3. Yet to be implemented
6	Blast Furnace - 2 (550 to 650 m ³)	MTPA	0.578	0.105	0.683	Yet to be implemented
7	Energy Optimizing Furnace-1 (45 to 65 T)	MTPA	0.41	0.23	0.64	Under progress

S.No	Manufacturing facilities	UOM	Existing capacity	Proposed Expansion	Total Capacity after Expansion	Present status
8	Energy Optimizing Furnace- 2 (45 T)	MTPA	0.62	0	0.62	Nil
9	Ladle Furnace - 1 (45 to 65 T)	Tons/heat	45	20	65	Under progress
10	Ladle Furnace - 2 (65 T)	Tons/heat	65	-	65	Nil
11	Ladle Furnace - 3 (65 T)	Tons/heat	65	-	65	Nil
12	Ladle Furnace - 4 (65 T)	Tons/heat	65	-	65	Nil
13	Continuous Casting Machine - 1	MTPA	0.35	-	0.35	Nil
14	Continuous Casting Machine - 2	MTPA	0.5	-	0.5	Nil
15	Continuous Casting Machine - 3	MTPA	-	0.45	0.45	Under progress
16	Bar & Rod Mill augmentation	MTPA	0.4	0.08	0.48	Under progress
17	Blooming Mill augmentation	MTPA	0.36	0.12	0.48	Yet to be implemented
18	Pickling & Annealing steel unit	MTPA	-	0.06	0.06	Under progress
19	Peeled & ground	MTPA	-	0.04	0.04	Yet to be implemented
20	Air Separation Plant - 1 (150 T/day)	Tons/day	150	-	150	Nil
21	Air Separation Plant - 2 (390 T/day)	Tons/day	390	-	390	Nil
22	Air Separation Plant - 3 (250 T/day)	Tons/day	-	250	250	Yet to be implemented
23	Captive power plant - 1	MW	7	-	7	Nil
24	Captive power plant - 2	MW	2 x 30	-	2 x 30	Nil
25	Captive power plant - 3	MW	-	1 x 30	1 x 30	Under progress

It is submitted, conditions stipulated in the EC dated 23.11.1998 and 02.01.2007 is already covered in the EC dated 2017.Hence, the given compliance status for the entire Steel complex is given below:

Α.	SPECIFIC CONDITIONS:	COMPLIANCE STATUS
i.	The occupational health survey of the active workmen involved shall be carried as per the ILO guidelines and all the employees shall cover in every 5 years @ 20% every year.	Occupational health survey of the active workmen involved is being carried out as per the ILO guidelines and all the employees will be covered in every 5 years @ 20% every year.
ii.	The amount allocated for ESC i.e. Rs 13 Crores shall be provided as CAPEX and the ESC shall be treated as project and monitored annually and the report of same shall be submitted to Regional office of MoEF&CC.	Enterprise Social Commitment provided as CAPEX and monitoring is in progress. The details are attached in Annexure – B.
iii.	The project proponent shall provide for solar light system for all common areas, street lights, villages, parking around project area and maintain the same regularly.	Solar panel system for Street Lighting at the capacity of 5 KW is installed and for further installation, feasibility study is under progress.
iv.	The project proponent shall provide for LED lights in their offices and residential areas.	LED based lightings are installed about 286 KW and further installation will be done in a phased manner.
v.	The project proponent should install 24X7 air monitoring devices to monitor air emission and submit report to Ministry and its Regional Office.	Total number of stacks in the Steel plant including power plant is 46 nos. The gaseous emission from the stacks attached to the process units are monitored through online stack monitoring equipment and the real time data of SPM, SO ₂ & NO _x (as per the condition) is transmitted to Care Air Centre of Tamil Nadu Pollution Control Board. Apart from that, TNPCB is conducting bi-annual survey and manual monitoring is being conducted by NABL approved external laboratory on monthly basis. All the monitoring results are well within the permissible limits.
vi.	The ETP for Blast furnace effluent should be designed to meet Cyanide standards as notified by the MoEFCC.	Presence of Cyanide level is not detected in Blast Furnace effluent and the same is periodically ensured with external NABL accredited lab analysis.
vii.	No effluent shall be discharged outside the plant premises and 'zero' discharge shall be adopted.	RO plant of 4 MLD Capacity is installed in the upstream of the raw water thereby the existing Cycles of concentration (CoC) in cooling towers is increased to optimum level thereby conserving raw water and also high TDS effluent generation is eliminated. Trade effluent generated from the processes (blow down water from Bar and Rod Mill, BF

		1 & 2, Continuous Casting Machine 1 & 2 Direct Cooling Water, BLM DCW, Air Separation Plant 1 & 2 & CPP II) is collected in the guard pond and after the pretreatment, the treated water 100% is reused in BF 1 & 2 Slag Granulation Plant, Gas Cleaning Plant of EOF 1 & II, slag quenching & Coke quenching.
		Thus, Zero Liquid Discharge (ZLD) is ensured and no effluent is discharged outside the plant premises. To ensure the same, dedicated EMFM and CCTV camera are installed and the real time values are connected to TNPCB & CPCB server.
viii.	The ETP for coke oven by-product should be designed to meet EPA notified standards especially the cyanide and phenol.	Our Coke Oven plant is non-recovery type. Hence, ETP plant is not envisaged.
ix.	Coke oven plant should meet visible emission standards notified by the MoEF&CC.	Our coke oven process works on negative pressure and adequate measuresare being taken during coal charging (stamped wet coal charging which is side loading to the ovens) and coke pushing (water spraying) to minimise emission, thereby no visible emission is evidenced.
x.	The standards issued by the Ministry vide G.S.R. 277(E) dated 31 st March 2012 shall be strictly adhered to and the standards prescribed for the Coke oven plant shall be monitored and the report should be submitted along with the six-monthly compliance report.	The standards issued by the Ministry vide G.S.R. 277(E) dated 31st March 2012 are adhered and our Coke Oven plant is of non-recovery type. Emission standards with respect to stack and fugitive for Non recovery type coke oven plant are monitored and the results are being submitted along with half-yearly compliance report. The six months monitoring results (maximum, minimum and average) by both Advanced Environmental Laboratory of TNPCB (Annexure – C) and NABL accredited laboratory (Annexure – D) consisting of stack emission, ambient air quality and noise are enclosed.
xi.	The emission standards specified in the Environmental (Protection) Amendment Rules, 2015 issued by vide S.O. 3305 (E) dated 7 th December 2015 for the Thermal Power Plant shall be strictly adhered to.	Actions are being taken to comply the emission standards. The parameters of SPM, SO ₂ , and Mercury& Specific water consumption are well within the standards and actions are initiated for complying NO _x emission as per the standard. Fly ash generated is 100% disposed to fly ash brick manufacturers.

	1	Me have installed favor more are
xii.	The National Ambient Air Quality Emission Standards issued by the Ministry vide G.S.R. No. 826(E) dated 16 th November 2009 shall be followed.	We have installed four numbers of Continuous Ambient Air Quality monitoring stations (2 in the upstream and 2 in the downstream) in the plant premises in consultation with the TNPCB. One station installed to monitor PM 10, PM 2.5, SO ₂ , NO _x and CO and other 3 stations are installed to monitor PM 10, PM 2.5, SO ₂ as per the CTO condition. The real time data of above parameters are connected to Care Air Centre of TNPCB. Ambient Air Quality is monitored in the surrounding villages by TNPCB during the bi annual survey and also monitored by authorized third party every week for the defined locations. Results (maximum, minimum & average) for the past 6 months are enclosed via Annexure – E.
		We have installed 4 nos. of Continuous Ambient Air Quality monitoring stations in the plant premises. Online continuous monitoring systems are installed in stacks to monitor SPM, SO ₂ & NO _x as per the condition.
		The gaseous emission from the stacks attached to the process units are monitored through online stack monitoring equipment and the real time data of SPM, SO ₂ & NO _x (as per the condition) is transmitted to Care Air Centre of Tamil Nadu Pollution Control Board.
xiii.	On-line ambient air quality monitoring and continuous stack monitoring facilities for all the stacks shall be provided and sufficient air pollution control devices viz. Electrostatic precipitator (ESP), and bag filters etc. shall be provided.	
		ESP, Bag filters are installed in sintering system for process and raw material handling emission control system. Quenching tower with grit arrestor is provided to control emission during coke quenching (wet type).
		Bag filters are provided to extract dust from Blast Furnace stock house, Wet & Dry Gas Cleaning Systems are provided in BF I & II respectively for control of dust emission from Blast Furnace.
		Wet gas cleaning system comprising of quenching chambers, Venturi scrubber and cyclone separator for cleaning of waste gas

		from Energy Optimizing Furnace, fumes Extraction System with Bag Filters to control fumes from Ladle furnaces& Adequate control system such as Steam exhaust systems are provided in continuous casting machine (CCM) process. As a continual improvement, additional new secondary dedusting systems are installed in Energy Optimizing Furnace (EOF), Ladle Refining Furnace (LRF) and in Blast furnace. The details of Stack and Air Pollution Control measures provided are enclosed vide Annexure – F
xiv.	A statement on carbon budgeting including the quantum of equivalent CO ₂ being emitted by the existing plant operations, the amount of carbon sequestered annually by the existing green belt and the proposed green belt and the quantum of equivalent CO ₂ that will be emitted due to the proposed expansion shall be prepared by the project proponent and submitted to the Ministry and the Regional Office of the Ministry. This shall be prepared every year by the project proponent. The first such budget shall be prepared within a period of 6 months and subsequently it should be prepared every year.	Statement on Carbon budgeting is prepared as per the condition and detailed report is submitted to the Ministry and the Regional Office of the Ministry on 02.02.2018.
XV.	For the employees working in high temperature zones falling in the plant operation areas, the total shift duration will be 4 hrs or less per day where the temperature is more than 50°C. Moreover, the jobs of these employees will be alternated in such a way that no employee is subjected to working in high temperature area for more than 1 hr continuously. Such employees would be invariably provided with proper protective equipment, garments and gears such as head gear, clothing, gloves, eye protection etc. There should also be an arrangement for sufficient drinking water at site to prevent dehydration etc.	Employees working in high temperature zones are provided with proper protective equipment, garments and gears such as head gear, clothing, gloves, eye protection, etc and arrangements are made for sufficient drinking water, butter milk and lime juice at plants to prevent dehydration.
xvi.	In-plant control measures and dust suppression system shall be provided to control fugitive emissions from all the vulnerable sources. Dust extraction and suppression system shall be provided at all the transfer points, coal handling plant and coke sorting plant of coke oven plant. Bag filters shall be provided to hoods and dust collectors to coal and coke handling to control dust	Dust/Fugitive emission suppression systems like water sprinklers, wind screens, tarpaulin covers are provided at raw material storage yards of coal, Iron ore, Lime stone, dolomite, etc. Bag filters are provided to extract dust in the raw material transfer points and Dry &Wet fog systems are installed in all the transfer

	emissions. Water sprinkling system shall be provided to control secondary fugitive dust emissions generated during screening, loading, unloading, handling and storage of raw materials etc.	points of coal and coke handling systems for dust suppression. Water sprinkler systems are installed in various locations to control of secondary fugitive dust emissions generated during screening, loading, unloading, handling and storage of raw materials etc.
		As part of continual improvement, Provision for covering shed at raw material storage yards is under progress.
xvii.	Gaseous emission levels including secondary fugitive emissions from all the sources shall be controlled within the latest permissible limits issued by the Ministry vide G.S.R. 414(E) dated 30 th May, 2008 and regularly monitored. Guidelines / Code of Practice issued by the CPCB shall be followed.	The G.S.R. 414(E) dated 30th May, 2008 is related to sponge iron plant. Hence, it is not applicable. In this connection, a representation is submitted to MoEFCC dated 22.07.17.
xviii	Hot gases from DRI Kiln should be passed through dust settling chamber (DSC) to remove coarse solids and After Burning Chamber (ABC) to burn CO completely and used in Waste Heat Recovery (WHRB). The gas then shall be cleaned in ESP before dispersion out into the atmosphere through ID fan and stack. ESP shall be installed to control the particulate emission from WHRB.	The existing and expansion of the steel plant is following blast furnace route and there is no DRI process in our operations. Hence, it is not applicable. In this connection, a representation is submitted to MoEFCC dated 22.07.17.
xix.	Efforts shall further be made to use maximum water from the rain water harvesting sources. If needed, capacity of the reservoir shall be enhanced to meet the maximum water requirement.	Rain water harvesting ponds are provided inside the plant (1500 and 2200 KL) and township (8000 KL) area to store rain water. Capacity of the reservoir shall be enhanced based on the needs and requirement.
XX.	Risk and Disaster Management Plan along with the mitigation measures shall be prepared and a copy submitted to the Ministry's Regional Office, SPCB and CPCB within 3 months of issue of environment clearance letter.	Study on Risk and Disaster Management Plan was conducted and detailed report submitted to Ministry's Regional Office, SPCB, and CPCB on 01.02.2018.
xxi.	All the blast furnace (BF) slag shall be granulated and provided to cement manufacturers for further utilization. Flue dust from sinter plant and SMS and sludge from BF shall be re-used in sinter plant. Coke breeze form coke oven plant shall be used in sinter and pellet plant. SMS slag shall be given for metal recovery and properly utilized. All the other solid waste including broken refractory mass shall be properly disposed off in environment-friendly manner.	All the Blast Furnace Slag is converted to Granulated slag and sold to cement industries. Flue dust from sinter plant & SMS and sludge from BF and Coke breeze from coke oven plant is re-used in sinter plant. Pellet plant is not installed in our process. SMS slag is sent for metal recovery system and after crushing, it is reused in cement industries/internal applications. Broken refractory mass is sold to customers involved with recycling and the disposal is in environment friendly manner.

xxii.	Coal and coke fines shall be recycled and reused in the process. The breeze coke and dust from the air pollution control system shall be reused in sinter plant. The waste oil shall be properly disposed of as per the Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016.	Coal and coke fines are recycled and reused in the Sinter plant and Blast Furnace. Coke breeze and dust from the Air Pollution Control systems are collected and reused in the Sinter Plant. The waste oil generated is being disposed to authorized vendor as per the Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016.
xxiii	Green belt shall be developed in 33 % of plant area. Selection of plant species shall be as per the CPCB guidelines in consultation with the DFO.	Green belt development is more than 33 % of the total plant areas and so far, 188486 trees exist throughout the plant premises. Some of the important species of trees are Gulmohar, Bamboo, Pungan, Nawar pazham, Neem, Eucalyptus, Ficus, Mahogany, Vaagai, Teak, Puvarasu, Baniyan, Vila, Banana, Casuarina, Fabaceae, tectona, saraca asoca.Bamboo,etc.The details are given in Annexure – G.
xxiv	All the recommendations made in the Charter on Corporate Responsibility for Environment Protection (CREP) for the Steel plants and Coke Oven Plants shall be implemented.	Complied.All the recommendations of the Charter on the Corporate Responsibility for the Environmental Protection (CREP) issued for the steel plants are implemented. Compliance report of CREP is enclosed vide Annexure – H.
xxv	At least 2.5% of the total cost of the project shall be earmarked towards the Enterprise Social Commitment based on Public Hearing issues, locals need and item-wise details along with time bound action plan shall be prepared and submitted to the Ministry's Regional Office. Implementation of such program shall be ensured by constituting a Committee comprising of the proponent, representatives of village Panchayat and District Administration. Action taken report in this regard shall be submitted to the Ministry's Regional Office.	Funds towards social commitments have been earmarked as indicated in the Annexure – I, and actions are being taken in a time bound manner.

	The preparent shall prepare a detailed CCD	
xxvi	The proponent shall prepare a detailed CSR plan for every year for the next 5 years for the existing-cum-expansion project, which includes village-wise, sector-wise (Health, Education, Sanitation, Health, Skill Development and infrastructure requirements such as strengthening of village roads, avenue plantation, etc) activities in consultation with the local communities and administration. The CSR plan will include the amount of 2% retain annual profits as provided for in Clause 135 of the Companies Act, 2013 which provides for 2% of the average net profits of previous 3 years towards CSR activities for life of the project. A separate budget head shall be created and the annual capital and revenue expenditure on various activities of the plan shall be submitted as part of the compliance report to RO. The details of the CSR plan shall also be uploaded on the company website and shall also be provided in the Annual Report of the company. The plan so prepared shall be based on SMART (Specific, Measurable, Achievable, Relevant and Time bound) concept. The expenditure should be aimed at sustainable development and direct free distribution and temporary relief should not be included.	CSR plan for the next 5 years is prepared and actions are initiated for compliance. The details are enclosed vide Annexure - I.
xxvi i	All the commitments made to the public during the Public Hearing /Public Consultation meeting shall be satisfactorily implemented and a separate budget for implementing the same shall be allocated and information submitted to the Ministry's Regional Office at Bhubaneswar.	The issues raised during the public hearing have been addressed. Budget for the projects has been earmarked as given in the Annexure – I and projects are in progress.
xxvi ii.	Provision shall be made for the housing of construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, Safe drinking water, medical health care, crèche etc. The housing may be in the form of temporary structures to be removed after the completion of the project.	Provisions are made for the expansion project activities and as per the condition temporary structure will be removed after the completion of expansion activities

В.	GENERAL CONDITIONS	COMPLIANCE STATUS
i.	The project authorities must strictly Adhere to the stipulations made by the concerned State Pollution Control Board and the State Government.	This is being followed as per the conditions.
ii.	No further expansion or modifications in the plant shall be carried out without prior approval of the Ministry of Environment, Forests and Climate Change (MoEF&CC).	There is no further expansion or modification in the plant is carried out without prior approval.
iii.	At least four ambient air quality monitoring stations should be established in the downward direction as well as where maximum ground level concentration of PM_{10} , $PM_{2.5}$, SO_2 and NO_X are anticipated in consultation with the SPCB. Data on ambient air quality and stack emission shall be regularly submitted to this Ministry including its Regional Office at Chennai and the SPCB/CPCB once in six months.	Four Continuous Ambient Air Quality monitoring stations are installed in the plant premises and one station installed to monitor PM 10, PM 2.5, SO2, NOx and CO and other 3 stations installed to monitor PM 10, PM 2.5, SO2 as per the CTO. The real time data are connected to Care Air Centre of TNPCB. Ambient Air Quality and Stack emission are monitored by TNPCB during the bi annual survey and also Ambient Air Quality and stack emission is monitored by NABL approved external laboratory on monthly basis. The reports are being submitted to Regional Office at Chennai and the SPCB/CPCB once in six months.
iv.	Industrial waste water shall be properly collected, treated so as to conform to the standards prescribed under GSR 422 (E) dated 19 th May, 1993 and 31 st December 1993 or as amended from time to time. The treated waste water shall be utilized for plantation purpose.	Industrial waste water is being collected, treated and reused 100 % in the processes for cooling application and parameters conform the prescribed standardsunder GSR 422 (E) dated 19 th May, 1993 and 31 st December 1993.
V.	The overall noise levels in and around the plant shall be kept well within the standards (85 dB(A)) by providing noise control measures including acoustic hoods, silencers, enclosures etc. on all sources of noise generation. The ambient noise levels should conform to the standards prescribed under EPA Rules, 1989 viz. 75 dB(A) during day time and 70 dB(A) during night time.	Source and Ambient noise levels are measured in and around the plant areas and control measures like acoustic hoods, silencers, and enclosures are provided wherever required. The noise levels of source and ambient is well within the standards prescribed under EPA Rules, 1989. The noise monitoring results by NABL approved laboratory is enclosed vide Annexure - F
vi.	Occupational health surveillance of the workers shall be done on a regular basis and records maintained as per the Factories Act.	Annual Health Check-ups are conducted for all employees on regular basis and records are being maintained in the Occupational Health Centre.
vii.	The company shall develop rain water harvesting structures to harvest the rain water for utilization in the lean season besides recharging the ground water table.	Rain water and water from the storm water drains are diverted to rainwater harvesting ponds for recharging the ground water table. Collected rain water is reused in the process.

viii.	The project proponent shall also comply with all the environmental protection measures and safeguards recommend in the EIA/EMP report. Further, the company must undertake socioeconomic development activities in the surrounding villages like community development programmes, educational programmes, drinking water supply and health care etc.	Environmental protection measures and safeguards recommend in the EIA/EMP report are being implemented.
ix.	Requisite funds shall be earmarked towards capital cost and recurring cost/annum for environment pollution control measures to implement the conditions stipulated by the Ministry of Environment, Forest and Climate Change (MoEF&CC) as well as the State Government. An implementation schedule for implementing all the conditions stipulated herein shall be submitted to the Regional Office of the Ministry at Chennai. The funds so provided shall not be diverted for any other purpose.	Capital cost and recurring cost/annum for environment pollution control measures are being initiated as stated in the EIA report.
x.	A copy of clearance letter shall be sent by the proponent to concerned Panchayat, Zila Parishad/ Municipal Corporation, Urban Local Body and the local NGO, if any, from whom suggestions/representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the company by the proponent.	Copy of clearance letter is submitted to local administration on 14.07.2017 and EC copy is uploaded in our website.
xi.	The project proponent shall upload the status of compliance of the stipulated environment clearance conditions, including results of monitored data on their website and shall update the same periodically. It shall simultaneously be sent to the Regional Office of the MoEF&CC at Chennai. The respective Zonal Office of CPCB and the SPCB. The criteria pollutant levels namely; PM ₁₀ , SO ₂ , NO _X (ambient levels as well as stack emissions) or critical sectoral parameters, indicated for the projects shall be monitored and displayed at a convenient location near the main gate of the company in the public domain.	The compliance of the stipulated environment clearance conditions including results of monitored data on our website is periodically uploaded. The criteria pollutant levels namely; PM ₁₀ , SO ₂ , NO _x are displayed near the entrance of main gates of our company in the public domain.

xii.	The project proponent shall also submit six monthly reports on the status of the compliance of the stipulated environmental conditions including results of monitored data (both in hard copies as well as by e-mail) to the Regional Office of MoEF&CC, the respective Zonal Office of CPCB and the SPCB. The Regional Office of this Ministry at Chennai/CPCB/SPCB shall monitor the stipulated conditions.	Environmental conditions and compliance status report including results of monitored data is being submitted to the Regional Office of MoEF &CC, Chennai, CPCB and SPCB once in six months.
xiii.	The environmental statement for each financial year ending 31st March in Form-V as is mandated to be submitted by the project proponent to the concerned State Pollution Control Board as prescribed under the Environment (Protection) Rules, 1986, as amended subsequently, shall also be put on the website of the company along with the status of compliance of environmental conditions and shall also be sent to the respective Regional Office of the MoEF&CC at Chennai by e-mail.	The environmental statement for each financial year ending 31 st March in Form-V and status of compliance of environmental conditions is being sent to the Regional Office of the MoEF&CC at Chennai. For the FY 2016-17 the report was submitted on 26.09.2017
xiv	The project proponent shall inform the public that the project has been accorded environmental clearance by the Ministry and copies of the clearance letter are available with the SPCB and may also be sent at website of the Ministry of Environment, Forests, and Climate Change (MoEF&CC) at http://envfor.nic.in. This shall be advertised within seven days from the date of issue of the clearance letter, at least in two local newspapers that are widely circulated in the region of which one shall be in the vernacular language of the locality concerned and a copy of the same should be forwarded to the Regional office at Bhubaneshwar.	Environmental Clearance accorded details have been advertised in Dinamani and The Indian Express on 14.07.2017 and a copy of the same submitted to the Regional office at Chennai on 15.07.2017.
xv	Project authorities shall inform the Regional Office as well as the Ministry, the date of financial closure and final approval of the project by the concerned authorities and the date of commencing the land development work.	Date of financial closure and land development work is informed to Regional Office vide letter dated 12.10.2017.

ANNEXURE # A

Production details from July to December 2017

Month	Pig Iron (Metric Ton)	Steel production (Metric Ton)	Power generation (MW)
July 17	1668	31552	0
August 17	2147	58447	730224
September 17	2337	80412	2363477
October 17	4029	85374	2508511
November 17	1518	84521	2411211
December 17	3586	87481	2970996
Total	15285	427787	10984419
Consent order quantity	0.3 MTPA	1.0 MTPA	7.0 MW
July to Dec 2017 production	0.015 MT	0.427 MT	2.54 MW

Note:

- MTPA Million Ton Per Annum
- MT Million Ton

Enterprise Social Commitment (ESC) Expenses

ANNEXURE # B

	Total	188486

ANNEXURE # H

Compliance progress / status / actions to the conditions mentioned in the Corporate Responsibility for Environmental Protection (CREP) issued to our Plant.

SI. No	Condition	Compliance status/Action
1.0	Coke Oven Plants To meet the parameters PLD (% leaking doors), PLL (% leaking lids), PLO (% leaking off take) of the notified standards under EPA. To rebuild at least 40% of the coke oven batteries* in next 10 years by December 2012.	It is Non-recovery type coke oven and this requirement is not applicable.
2.0	Steel Melting Shop Fugitive Emission Status To reduce 30% by March 2004 and 100% by March 2008 (including	SMS comprises of an Energy Optimizing Furnace wherein a "wet scrubbing system" comprising of a Down comer, quench chamber, venturi scrubber and cyclone separator and the cleaned gas sent through a chimney. The secondary steel making unit viz. Ladle Furnace is already equipped with a dry scrubbing system comprising of bag
	installation of secondary de-dusting facilities).	filters, belt conveyors and dust silo. The dust is being collected and reused in the Sinter Plant. Fugitive emission is controlled by operating secondary dedusting system. Pulverized Coal injection system installed
3.0	 Blast Furnace Direct inject of reducing agents in blast furnace. 	and commissioned along with bag filter as an air pollution control measures to reduce emission during direct inject.
	Solid Waste/Hazardous Waste Management Utilization of Steel Melting Shop (SMS) / Blast Furnace (BF) slag as per the following. By 2004 – 70% By 2006 – 80% and	All the Blast Furnace Slag is converted to Granulated slag and sold to cement industries. Flue dust from sinter plant & SMS and sludge from BF and Coke breeze from coke oven plant is re-used in sinter plant. Pellet plant is not installed in our process.
4.0	 By 2000 – 80 % and By 2007 – 100% Hazardous Waste: Charge of tar sludge/ETP sludge to coke oven by June 2003. 	SMS slag is sent for metal recovery system and after crushing, it is reused in cement industries/internal applications. Broken refractory mass is sold to customers involved with recycling and the disposal is in environment friendly manner.
		Coal and coke fines are recycled and reused in the Sinter plant and Blast Furnace. Coke breeze and dust from the Air Pollution Control systems are collected and

	 Inventorization of Hazardous waste as per Hazardous waste (M & H) Rules, 1989 as amended in 2000 and implementation of the rules by December 2003. (Tar sludge, acid sludge, waste lubricating oil and type fuel fall in the category of HZ). 	reused in the Sinter Plant. The waste oil generated is being disposed to authorized vendor as per the Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016.
5.0	 Water Conservation / Water Pollution To reduce specific water consumption to 5 m3/ t for long products and 8m3/ t for flat products by December 2005. 	We are presently manufacturing only long products and our specific water consumption is well within the prescribed limit.
6.0	Installation of continuous stack monitoring	Total number of stacks in the Steel plant including power plant is 46 nos. The gaseous emission from the stacks attached to the process units are monitored through online stack monitoring equipment and the real time data of SPM, SO ₂ & NO _x (as per the condition) is transmitted to Care Air Centre of Tamil Nadu Pollution Control Board. Apart from that, TNPCB is conducting bi-annual survey and manual monitoring is being conducted by NABL approved external laboratory on monthly basis. All the monitoring results are well within the permissible limits.
7.0	The unit shall operate the existing pollution control equipment efficiently and to keep proper record of run hours, failure time and efficiency with immediate effect. Compliance report in this regard be submitted to TNPCB every three months.	Complied.
8.0	To implement the recommendations of Life Cycle Assessment (LCA) Study sponsored by MOEF by December 2003.	Complied.
	The industry will initiate the steps to adopt the following clean technologies/measures to improve the performance of industry towards production, energy and environment. Energy recovery of top blast furnace (BF) gas.	The entire blast furnace gas is being used in the Captive Power Plant to produce steam/power. To heat the cold blast in stoves, sinter plant ignition hood and Bar & Rod Mill re-heating furnace as fuel.
9.0	- Use of tar – free runner linings.	Not Applicable
	- De-dusting of cast house at tap holes, runners, skimmers ladle and charging points.	The de-dusting system commissioned at BF-II cast house covering tap holes, runners, skimmers ladles and charging points.
	 Suppression of fugitive emissions using nitrogen gas or other inert 	Water sprinkling system and the compressed air is used in the de-dusting for

gas.

- To study the possibility of slag and fly ash transportation back to the abandoned mines, to fill up the cavities through empty railway wagons while they return back to the mines and its implementation.
- Processing of the waste containing flux & ferrous wastes through waste recycling plant.
- To implement rainwater Harvesting
- Reduction of green house gases by,
 - Reduction in power consumption.
 - Use of by-products gases for power generation.
 - Promotion of energy optimization technology including energy audit.
- To set targets for resource conservation such as raw material, energy and water consumption to match International Standards.

Up-gradation in the monitoring and analysis facilities for air and water pollutants. Also to impact elaborate training to the manpower so that realistic data is obtained in the environmental monitoring laboratories.

To improve over all house keeping.

dust extraction.

Since we are purchasing raw materials from outside sources, it is not applicable.

The waste containing flux & ferrous waste is utilized to the maximum extent possible in the sinter plant. 100 % of waste containing flux and ferrous is utilized in the plant.

Three rain water harvesting ponds are provided. Two are in the plant premises and third one in township.

Installed a capacitor bank at the Main Receiving Sub Station (MRSS) for improvement of power factor and to reduce the power consumption.

By product BF gas is being used as fuel in Power Plant for power generation.

Steel Melting Shop has been provided with Energy Optimization Furnace, where facilities are available for scrap preheating using waste heat gas.

Raw material, Energy and water targets are being planned to match the international standards (Best Available Technology).

A separate Environment cell is already available and full-fledged lab set up and need based training is being imparted to the monitoring personnels as and when required. Presently the monitoring and analysis being done through M/s Green Chem Solution Pvt. Ltd. Chennai, certified by NABL and MoEFCC.

5S system is followed to maintain and improve housekeeping throughout the plant.

ANNEXURE # I

CSR Long Term Plan

				YEAR		
S. No	Programmes	2017-18	2018-19		2020-21	2021-22
